

Will the broadcast flag interfere with consumers ability to make copies of DTV content for their personal use, either on personal video recorders or removable media?

I belive this would infringe the rights of the public.

Would the digital flag interfere with consumers ability to send DTV content across networks, such as home digital networks connecting digital set top boxes, digital recorders, digital servers and digital display devices?

If this is true what is the purpose of the flag ?

Would the broadcast flag requirement limit consumers ability to use their existing electronic equipment (equipment not built to look for the flag) or make it difficult to use older components with new equipment that is compliant with the broadcast flag standard?

I find this highly unlikely.

Would a broadcast flag requirement limit the development of future equipment providing consumers with new options?

Impleminets such as this would probly hinder future inovations, and add unjustified cost to design and production.

What will be the cost impact, if any, that a broadcast flag requirement would have on consumer electronics equipment?

The cost would ultimately fall on the consumer.

Other Comments:

I belive to pass this flag would be a violation of our freedoms as Americans.
